Want to compare the US, with Europe, Africa (excluding SA), and SA (and maybe Asia, or specifically china)

```
## # A tibble: 7 x 1
##   continent
##   <chr>
## 1 Asia
## 2 <NA>
## 3 Europe
## 4 Africa
## 5 North America
## 6 South America
## 7 Oceania
```

[Share of woman vs men](#) in SA about equal

Towards estimating the fixed effects, let's see which variables do not change over the time period we have.

Checking the plots of all the features:

we have to rescale the variables else the effect will never be detected in some cases

We need to have a look at the correlation between the different variables to see what type of relationships exist. Furthermore, it is important to
